

Evaporator Identification

Date of issue:
27-05-2013

Reason :
Two types of evaporators are available, see below.

The Low-Noise version was introduced at a later date to solve some “howling” burner noise problems. This type of evaporator can be recognised by the collar at the top.

When ordering spare mesh for the evaporator it is important to know which version is required as the Low-Noise version has a shorter mesh then the standard evaporator.

Parts affected:
WP-1021-000 Evaporator
WP-1051-000 Evaporator (low noise)
